Master Speaking

Teacher Implementation Pack

Teacher resources for the self-contained course • October 2026

Read alongside the book and the separate Class Companion. This pack provides the eight original fictional listening stories used in the book, matching questions and keys, reading keys, and a four-lesson teaching plan. The listening tasks are designed for a teacher or partner to read aloud; no external video or recorded audio is required.

The Unit 1 pilot deliberately uses four 75-minute meetings, one per chapter. It is a slower diagnostic trial than the Class Companion's two-meeting unit plan. Do not promise both schedules cover the same work in the same time; use observed timings to choose whether to extend the course or reduce task coverage.

All listening accounts and speaking models in this pack are newly authored fictional teaching examples. They are not transcripts, research findings, quotations from real students, or evidence of a successful classroom trial. No live pilot has been conducted. Student-facing questions and models are exported separately so teachers can withhold scripts and keys during listening practice.

1. Delivery, preparation, and assessment

Choose the matching unit in the Student Practice Pack. For Chapter 2, use the matching original story in this pack and its five detail questions. The same script appears at the end of the listening chapter for checking after the task. Keep that section covered until after the second listening unless an access arrangement requires earlier text support.

Before each class: preview the topic for suitability; read the script aloud once; check the question key; print only the student pages needed; prepare a timer and grouping plan; identify one success criterion to observe. An internet connection, AI account, slide deck, or recording device is not required.

Teacher-read listening protocol (approximately 15 minutes)

- 0–2 minutes: students read the gist question and predict the kind of information they may hear. Explain only essential vocabulary that would otherwise block understanding; do not preteach the answers.
- 2–4: read the whole script once at a clear, comfortable pace, roughly 110–140 words a minute. Do not exaggerate stress on answer words. Students note the main problem or decision.
- 4–5: pairs compare their gist answers. Do not distribute the script yet.
- 5–7: students preview the five detail questions. Read the same script a second time without changing its wording.
- 7–10: pairs compare details and mark uncertainty. Offer a targeted replay if needed and note that support when comparing performance.
- 10–13: check answers against the key; ask which words helped. Accept accurate paraphrases and do not penalize minor spelling unless it changes meaning.
- 13–15: release the script for noticing and a short oral retell. A script provided before listening changes this into supported reading/listening; record the adaptation rather than claiming the same assessment conditions.

For an optional formative detail score, award one point per question, maximum five. For a question requesting two details, award half a point for each correct detail. Use the same rule for the whole class and distinguish an inaccurate answer from a language-form error. Gist and retell are feedback opportunities, not part of this five-point score. This is not a standardized listening test.

Use the five-dimension rubric in Class Companion Section 14 for speaking. Observe interaction in a paired exchange, not only a presentation. Give one specific strength and one next step. Do not grade accent identity, beliefs, extroversion, personal disclosure, or compulsory eye contact. Plan consent-based, private handling of any recordings.

The short models show useful moves; they are not full-length answers to every book assignment. Unit 1’s sample response includes five discussion expressions, but its six-turn dialogue is only a starter: students still need ten toolbox expressions to meet the book’s full Vocabulary Activation instruction. Use a lower target as documented scaffolding, not as evidence that the original requirement was met.

2. Unit 1 pilot • Lesson 1: reading into speaking

Length: 75 minutes. Book: Unit 1, Chapter 1. Print the Unit 1 models/checklist page; keep the reading key for teacher use. Learners may choose fictional situations. This pilot is formative, not a validated treatment or a promise of measured improvement.

Success evidence: each learner gives a main point in their own words, supports it with two reading details, and asks a responsive question. Give the same preparation time to learners whose performances you plan to compare.

- 0–7: entry task. In pairs, each learner speaks for one minute about a change that would improve a study club; partners ask one question. Teacher samples a few exchanges without giving a class-wide proficiency label.
- 7–15: discuss the book's Before You Read questions. Accept different opinions; ask for reasons rather than a correct belief.
- 15–27: preview essential vocabulary, read the passage, and locate its main point. Learners note keywords rather than copying a paragraph.
- 27–39: complete the Vocabulary Check and five multiple-choice items. Compare answers and locate supporting words using the source-linked key.
- 39–47: use selected Answer the Questions items to distinguish a relevant paraphrase from a copied sentence. Allow brief planning support where helpful.
- 47–59: run Activity 1 in pairs: Student A summarizes for one minute; B asks two follow-ups. Switch roles, then use remaining time to improve the least clear part.
- 59–68: teacher shares two anonymous language examples; pairs repeat a 45-second summary using one improvement. Do not correct every error while students are speaking.
- 68–75: learners mark the Chapter 1 checklist and write an example of what they could do, not just a confidence rating.

Monitor: note whether a learner gives the overall message or only lists details; whether a follow-up responds to what was said; and whether meaning remains clear during word searching. Home practice: a one-minute explanation to oneself or a willing listener, followed by one revision. Recording is optional.

3. Unit 1 pilot • Lesson 2: listening and clarification

Length: 75 minutes. Use the original story “The meeting that almost went wrong” and the matching questions in Unit 1, Chapter 2 or the Student Practice Pack. Keep the script and keys separate until after listening. Record the input and any access support actually used.

Success evidence: identify the central problem, recover key details, and clarify a new plan in an exchange. Students should not be assessed on information the input does not provide.

- 0–8: retrieve three expressions from Lesson 1; each student asks a clarification question about a fictional meeting plan.
- 8–23: run the 15-minute listening protocol from Section 1 using the Unit 1 story.
- 23–33: reveal the script and examine the checking sequence: unclear message, specific question, repeated plan, confirmation. Have learners point to evidence.
- 33–43: teach “When you say…, do you mean…?”, “Let me check…”, and “Which…?” Practise with short exchanges rather than a chorus alone.
- 43–58: role-play. A privately chooses a room, time, materials, and contact person for a new club meeting. B must find those details by asking questions. Switch roles with a different plan; then change one detail and check the revision.
- 58–67: pairs report one misunderstanding and how they repaired it. Teacher gives anonymous feedback and asks for a clearer second attempt.
- 67–75: mark the Chapter 2 checklist. Record the input route, replay support, and one next listening goal.

Access: offer a written instruction card, seated pair work, and additional planning time. If a transcript is required before listening as an access arrangement, provide it and document the different conditions. Never deny access in order to preserve a score comparison.

4. Unit 1 pilot • Lesson 3: discussion that develops

Length: 75 minutes. Book: Unit 1, Chapter 3. Print the model dialogue and response. The models are fictional examples, not scripts to memorize or opinions students must adopt.

Success evidence: give a supported position, acknowledge a partner's point, and ask a question that develops the exchange. Assess the quality of a contribution, not only the number of turns.

- 0–8: silent planning and paired warm-up: which communication skill matters most in a study club, and why?
- 8–18: read the six-turn model. Mark a clarification, an example, an acknowledgement, and a challenge. Distinguish a responsive question from an unrelated prepared question.
- 18–28: inspect the Speaking Toolbox. Partners select useful expressions and create a short starter exchange. Build toward the book's ten-expression requirement; do not force all ten unnaturally into the first attempt.
- 28–43: groups of four discuss selected Guided Discussion questions. Rotate facilitator and participation monitor after seven minutes. Allow learners to use fictional examples.
- 43–51: collect feedback: one useful way of asking for a reason and one example of a claim that needs support. Learners revise privately before trying again.
- 51–65: practise the book's two-minute Speaking Challenge in pairs, with keywords only. Each student uses five toolbox expressions, two reasons, and a personal or fictional example. Switch speaking/listening roles; listeners ask one follow-up.
- 65–75: peer feedback, a short repeated attempt, and Chapter 3 checklist. Note whether expression use helped meaning or sounded forced.

Extension: ask a learner to acknowledge a counterargument before defending a position. Support: provide a reason/example frame and a shorter rehearsal before the full task. A shorter supported rehearsal is useful practice but is not completion of the full timed challenge.

5. Unit 1 pilot • Lesson 4: presentation and questions

Length: 75 minutes. Book: Unit 1, Chapter 4. Students prepare a three-to-four-minute presentation with three points, examples, a conclusion, and the book's language requirements. One presentation topic can be "How can our study club communicate more clearly?" Present a fictional club if preferred.

For this pilot, presentations are practised simultaneously in groups of three. The teacher samples performances for formative feedback; this does not constitute formal individual assessment of every learner. Arrange separate assessment slots if formal scores are required.

- 0–8: retrieve opening, signposting, and closing expressions. Discuss how an opening helps a listener know what to expect.
- 8–18: model sentence stress using one sentence with different intended contrasts. Aim for intelligibility, not a single supposedly natural accent.
- 18–30: plan three points, with one example each. Identify which ideas come from the reading and which are opinions or fictional examples. If using another source, name it accurately; do not add an unsupported "research proves" phrase.
- 30–40: partner rehearsal of the opening and one point; give a specific clarity comment and revise.
- 40–61: in trios, each learner presents for three to four minutes, takes up to two minutes of questions, and receives one minute of feedback. Rotate presenter, questioner, and feedback listener. The 21-minute window accommodates three seven-minute turns.
- 61–69: repeat the most difficult 45 seconds with a changed opening or clearer signpost. Teacher shares one observed strength and one next step.
- 69–75: complete the Chapter 4 checklist and pilot feedback form. Learners choose one speaking goal for the next unit.

If a learner needs an alternative to eye contact, accept other signs of audience awareness: an accessible handout, clear signposting, turning toward the group if comfortable, or inviting questions. If the student has no visual aid, do not insist on using "As you can see…" merely to reach an expression count.

6. Unit 1 reading key • scope and use

This key covers Unit 1, Chapter 1 only: five vocabulary completions, five multiple-choice questions, and five open reading questions. No True/False exercise is present in that chapter. Closed-reading keys for Units 2–8 appear in Section 16. The original listening stories have their own detail keys in Sections 7–14; open questions allow supported alternatives.

Answers are grounded in the revised passage or vocabulary table, not independently validated claims about the real world. Each quoted evidence phrase is checked against the current semantic book during QA. Use question stems rather than page numbers, since pagination can change. Accept accurate paraphrases for the five open questions. Critical Thinking, personal connections, and discussions have no single correct opinion.

For Find the Evidence, learners may cite regular participation and feedback in Sara's example, the comparison with other practised skills, and the closing invitation to learn from each conversation. This is a set of possible textual supports, not a demand to reproduce three fixed sentences.

For the personal-connection sentences, check that the proposed action is specific enough to try. For example, "ask one follow-up question in each partner discussion" is more observable than "be better at English." Never require an actual private experience as proof of participation.

Vocabulary Check

Question: Good communication helps us _____ ideas clearly.

Answer / acceptable content: express; communicate is also acceptable

Reason: Both verbs make sense here and both appear in the preview. The instruction does not say every word must be used once.

Text evidence: "Students should express their opinions respectfully."

Question: Never _____ to ask for help.

Answer / acceptable content: hesitate

Reason: Hesitate to do something means pause because of uncertainty.

Text evidence: "Don't hesitate to ask questions."

Question: Teachers should encourage classroom _____.

Answer / acceptable content: interaction

Reason: The noun names communication between people.

Text evidence: "Classroom interaction improves learning."

Question: Speaking regularly builds _____.

Answer / acceptable content: confidence

Reason: The preview connects practice with belief in yourself.

Text evidence: "Practice builds confidence."

Question: Every presentation has an important _____.

Answer / acceptable content: message

Reason: Message is the main idea being communicated.

Text evidence: "His message inspired many people."

Reading Comprehension · Choose the Best Answer

Question: According to the reading, communication is

Answer / acceptable content: c — a combination of several skills

Reason: The reading includes speaking, listening, questioning, body language, writing, and responding.

Text evidence: “It includes listening carefully, asking meaningful questions, understanding body language, writing clearly, and responding appropriately.”

Question: Why does Ali improve slowly?

Answer / acceptable content: c — He avoids speaking.

Reason: The example contrasts his avoidance with Sara’s regular participation.

Text evidence: “Ali improves more slowly because he avoids communication.”

Question: Why does Sara improve faster?

Answer / acceptable content: b — She practices speaking regularly.

Reason: The passage explains her increased confidence through participation and practice.

Text evidence: “Sara becomes a more confident speaker through regular practice.”

Question: Which statement is TRUE?

Answer / acceptable content: b — Listening is an important communication skill.

Reason: The reading explicitly includes listening as part of communication.

Text evidence: “Listening deserves the same attention as speaking.”

Question: What is the main idea of the reading?

Answer / acceptable content: b — Communication develops through practice.

Reason: This summarizes the passage rather than only one of its examples.

Text evidence: “learning to communicate takes practice”

Answer the Questions · suggested content, not fixed wording

Question: Why do many students avoid speaking English?

Answer / acceptable content: They fear making mistakes or think their English must be perfect before they speak.

Reason: Accept a clear paraphrase. Assess understanding before correcting language form.

Text evidence: “Ali knows thousands of English words but rarely speaks because he is afraid of making mistakes.”

Question: What can good listeners do?

Answer / acceptable content: Pay attention to ideas, emotions, and intentions; ask follow-up questions; restate the main point to check understanding. Attention need not look the same for everyone.

Reason: Accept relevant actions from the text; do not require a specific gaze behavior from learners.

Text evidence: “They can ask follow-up questions or briefly restate the main point to check their understanding.”

Question: How does communication help society?

Answer / acceptable content: It helps people make decisions, teach, understand needs, agree on action, solve problems, and share knowledge.

Reason: Accept a relevant selection of examples; no need to reproduce every profession listed.

Text evidence: “Communication also helps people solve problems and share knowledge.”

Question: Why is communication compared to learning football or driving?

Answer / acceptable content: It is a skill that develops through practice, like those activities.

Reason: The analogy is about learning through practice, not proof that all skills develop in exactly the same way.

Text evidence: “Like learning to drive, play football, or use a computer, learning to communicate takes practice.”

Question: What advice does the writer give English learners?

Answer / acceptable content: Speak rather than waiting for perfection, listen carefully, and keep learning from conversations.

Reason: Accept paraphrases of the closing advice.

Text evidence: “Use the words you know, listen carefully, and ask for clarification when you need it.”

7. Unit 1 • Original listening story and key

The Power of Communication — The meeting that almost went wrong

Original fictional teaching script for the matching Chapter 2. Use the five detail questions in the main book or the identical Student Practice Pack worksheet. No external recording is required.

Delivery: read the following 226-word script twice using Section 1. Do not give students the script or key before the first listening unless an access arrangement requires it.

Read-aloud script

Our study club usually meets in Room Two at four in the afternoon. Last Monday, the organizer sent a short message: Meet in the new room at the usual time. I knew the time, but I did not know which room was new. Instead of guessing, I asked for the room number. The organizer replied that we should use Room Five because Room Two needed repairs. I repeated the plan back: Room Five, four o'clock, Monday. She confirmed it and sent a clearer message to the whole group. Before the meeting, I also asked who was bringing the books. It turned out that nobody had agreed to bring them, so I offered. We started on time, and everyone had something to read.

Afterward, one member said that asking so many questions had slowed everything down. I understood her point: nobody wanted a long exchange about a simple meeting. But the original message had left two different gaps. The room number needed a precise answer; the books needed someone to accept a responsibility. Simply agreeing that the plan sounded fine would not have settled either problem. Next time, I would ask the organizer to put the place, time, and responsibilities in one message. I would also check that everyone had seen the correction. A clear message is useful only if it reaches the people who need it.

Gist — suggested answer: A club member clarifies an unclear plan and helps the meeting run smoothly.

Detail key — one point each; accept accurate paraphrases.

1. What caused the uncertainty?

Answer: The message said new room without giving a room number.

Evidence: "I did not know which room was new."

2. Which room did the club use?

Answer: Room Five.

Evidence: "we should use Room Five"

3. Why was the usual room unavailable?

Answer: It needed repairs.

Evidence: "Room Two needed repairs"

4. How did the speaker check the meeting plan?

Answer: By repeating the room, time, and day back and receiving confirmation.

Evidence: "I repeated the plan back: Room Five, four o'clock, Monday."

5. What responsibility did the speaker take on?

Answer: Bringing the books.

Evidence: "nobody had agreed to bring them, so I offered"

Interpretation — suggested reasoning, not a required opinion

Why might the member's complaint be reasonable, even though clarification helped?

Suggested reasoning: Repeated questions can take time; the listener should explain which gaps actually need checking.

Supporting detail: "nobody wanted a long exchange about a simple meeting"

What is the difference between clarifying information and agreeing on an action in this account?

Suggested reasoning: Clarifying establishes the room and time; agreeing on action establishes who will bring the books.

Supporting detail: "the books needed someone to accept a responsibility"

Transfer: use the matching Your turn activity in the Student Practice Pack. Assess the new exchange, not whether a learner reproduces the script's wording or opinion.

8. Unit 2 • Original listening story and key

The Art of Goal Setting — A smaller plan that lasted

Original fictional teaching script for the matching Chapter 2. Use the five detail questions in the main book or the identical Student Practice Pack worksheet. No external recording is required.

Delivery: read the following 248-word script twice using Section 1. Do not give students the script or key before the first listening unless an access arrangement requires it.

Read-aloud script

At the beginning of the month, I planned to learn twenty new English words every evening. On the first day I did it, but by Thursday I was tired and had stopped. My friend asked what I actually wanted to do with the words. I said I wanted to take part in class discussions. We made a smaller plan: on Monday, Wednesday, and Friday, I would choose two useful expressions and use them in a short spoken response. Each practice would take ten minutes. After two weeks, I would check whether I could explain a point without writing every sentence first. I missed one evening, but I returned to the plan on Friday. I had learned fewer new words than I originally intended, yet I was practising the skill I wanted to improve.

At our review, my friend asked whether I had lowered my ambition. I said the ambition was still to join a discussion, not to finish a word list. We compared two attempts on the same topic. In the first, I used more new words but could not explain my reason. In the second, I used simpler language and answered a follow-up question. That was useful evidence, although it did not prove that every part of my English had improved. For the next fortnight, I kept the short routine and added one conversation with a willing partner. If that was difficult to arrange, I would practise explaining the same idea from a different point of view.

Gist — suggested answer: A learner replaces an ambitious word target with a smaller plan connected to speaking.

Detail key — one point each; accept accurate paraphrases.

1. What was the original daily target?

Answer: Twenty new English words every evening.

Evidence: “twenty new English words every evening”

2. What did the speaker actually want to do?

Answer: Take part in class discussions.

Evidence: “I wanted to take part in class discussions”

3. On which three days would the new practice happen?

Answer: Monday, Wednesday, and Friday.

Evidence: “on Monday, Wednesday, and Friday”

4. How long would each practice take?

Answer: Ten minutes.

Evidence: “Each practice would take ten minutes.”

5. When would the speaker review the plan?

Answer: After two weeks.

Evidence: “After two weeks, I would check”

Interpretation — suggested reasoning, not a required opinion

Why does the speaker reject word count as the only measure of progress?

Suggested reasoning: The aim is to participate in discussion; explaining a reason and answering a question show something a word total does not.

Supporting detail: “the ambition was still to join a discussion, not to finish a word list”

What can the two attempts show, and what can they not establish?

Suggested reasoning: They illustrate a difference on one task, not improvement in every aspect of English.

Supporting detail: “it did not prove that every part of my English had improved”

Transfer: use the matching Your turn activity in the Student Practice Pack. Assess the new exchange, not whether a learner reproduces the script’s wording or opinion.

9. Unit 3 • Original listening story and key

Emotional Intelligence — Before making an assumption

Original fictional teaching script for the matching Chapter 2. Use the five detail questions in the main book or the identical Student Practice Pack worksheet. No external recording is required.

Delivery: read the following 227-word script twice using Section 1. Do not give students the script or key before the first listening unless an access arrangement requires it.

Read-aloud script

During our group project, Kareem spoke very little. At first, I thought he was not interested. I nearly told the teacher that he was not helping. Instead, I asked him privately whether the task was clear. He said he understood it, but the group moved so quickly that he could not find a moment to speak. He had already written several useful suggestions in his notebook. At the next meeting, we gave everyone a minute to explain one idea without interruption. Kareem suggested a simpler way to organize our presentation, and we used it. I learned that silence did not tell me enough about his effort or interest. Asking a question gave me information that my first assumption had missed.

The change did not solve every disagreement. Later, I wanted a dramatic opening, while Kareem preferred a quiet explanation. This time, I could feel myself becoming impatient. I asked for a minute to write down what each opening would help the audience understand. We then tried both versions with another group. Their questions helped us choose, although Kareem and I still preferred different styles. I had first treated his silence as evidence of his attitude. It was really a reason to ask a question. Listening to him did not mean agreeing with every suggestion; it meant giving his ideas a fair hearing before we made a decision.

Gist — suggested answer: A question reveals why a quiet group member has not been speaking.

Detail key — one point each; accept accurate paraphrases.

1. What did the speaker first assume about Kareem?

Answer: That he was not interested.

Evidence: “I thought he was not interested”

2. Did Kareem understand the task?

Answer: Yes.

Evidence: “He said he understood it”

3. What made it difficult for him to contribute?

Answer: The group moved too quickly for him to find a turn.

Evidence: “the group moved so quickly that he could not find a moment to speak”

4. What change did the group make?

Answer: Everyone received a minute to explain an idea without interruption.

Evidence: “we gave everyone a minute to explain one idea without interruption”

5. What did Kareem contribute?

Answer: A simpler way to organize the presentation.

Evidence: “a simpler way to organize our presentation”

Interpretation — suggested reasoning, not a required opinion

What was the weakness in the narrator's first judgment about Kareem?

Suggested reasoning: The narrator inferred an attitude from silence without checking the reason.

Supporting detail: "I had first treated his silence as evidence of his attitude"

How does the later disagreement distinguish understanding from agreement?

Suggested reasoning: They listen and test both openings, but do not have to share the same preference.

Supporting detail: "Kareem and I still preferred different styles"

Transfer: use the matching Your turn activity in the Student Practice Pack. Assess the new exchange, not whether a learner reproduces the script's wording or opinion.

10. Unit 4 • Original listening story and key

Money and Happiness — One hundred credits

Original fictional teaching script for the matching Chapter 2. Use the five detail questions in the main book or the identical Student Practice Pack worksheet. No external recording is required.

Delivery: read the following 236-word script twice using Section 1. Do not give students the script or key before the first listening unless an access arrangement requires it.

Read-aloud script

Our learning club had one hundred imaginary credits for a planning exercise. We could buy books for forty credits, improve the lighting for thirty-five, or hold an event for thirty. Buying all three would cost more than we had. Some members wanted the event because new students had not met one another. Others said the room was too dark for reading. We agreed to buy the books and improve the lighting, leaving twenty-five credits unspent. For the new students, we planned a free conversation afternoon instead of the paid event. Not everyone preferred that choice, but each person had a chance to explain their reasons. Before ending the meeting, we wrote down the total and agreed to ask members whether the changes helped them use the room.

At our next meeting, someone asked whether the larger group had simply outvoted the newcomers. That question changed our discussion. Saving credits was easy to count; feeling welcome was not. We asked two new members to help plan the conversation instead of assuming that a free event would meet their needs. We also agreed to ask whether the room had become easier to use after the changes. The decision was not proof that books create more happiness than celebrations. It was a choice about this group, this room, and a limited budget. Another group might reasonably choose differently, especially if its members already had a comfortable place to read.

Gist — suggested answer: Club members explain different priorities and agree on a budget compromise.

Detail key — one point each; accept accurate paraphrases.

1. How many credits did the club have?

Answer: One hundred.

Evidence: “one hundred imaginary credits”

2. What did the books cost?

Answer: Forty credits.

Evidence: “buy books for forty credits”

3. Which two paid options did the club choose?

Answer: Books and improved lighting.

Evidence: “buy the books and improve the lighting”

4. How many credits remained?

Answer: Twenty-five.

Evidence: “leaving twenty-five credits unspent”

5. What replaced the paid event?

Answer: A free conversation afternoon.

Evidence: “a free conversation afternoon instead of the paid event”

Interpretation — suggested reasoning, not a required opinion

Why is the final choice not evidence that one kind of spending always brings more happiness?

Suggested reasoning: It responds to one group's needs and budget; another group could have different priorities.

Supporting detail: "It was a choice about this group, this room, and a limited budget"

What concern does inviting new members to help plan the conversation address?

Suggested reasoning: It gives newcomers a role instead of assuming that the majority knows what would welcome them.

Supporting detail: "instead of assuming that a free event would meet their needs"

Transfer: use the matching Your turn activity in the Student Practice Pack. Assess the new exchange, not whether a learner reproduces the script's wording or opinion.

11. Unit 5 • Original listening story and key

Living with AI — A confident answer was not enough

Original fictional teaching script for the matching Chapter 2. Use the five detail questions in the main book or the identical Student Practice Pack worksheet. No external recording is required.

Delivery: read the following 239-word script twice using Section 1. Do not give students the script or key before the first listening unless an access arrangement requires it.

Read-aloud script

I asked an AI tool to help me draft an announcement for our club meeting. It produced a clear paragraph and said we would meet on Thursday in Room Three. I had not given it those details. Before sharing the announcement, I checked the noticeboard. The actual meeting was on Wednesday in Room Five. I corrected the day and room, then asked the organizer to check the whole message. I kept the tool's suggested order of information because it was useful, but I did not trust the invented details. I also left classmates' phone numbers out of the tool. When I shared the final announcement, I explained that a tool had helped with the draft and that the organizer had confirmed the meeting information.

A classmate asked why I had used the tool at all if I needed to check its work. I showed her my rough notes and the clearer order in the draft. That help was real, but it was different from knowing when our meeting would happen. The confident tone had made the invented details easy to overlook. We agreed on a simple rule for our next announcement: keep a record of the facts we supply, mark anything the tool adds, and check those additions before sharing. If we could not verify a detail, we would leave it out or say that it was unconfirmed. A polished paragraph should make our responsibility clearer, not hide it.

Gist — suggested answer: A learner keeps useful drafting help but verifies invented details before sharing a message.

Detail key — one point each; accept accurate paraphrases.

1. Which day did the tool invent?

Answer: Thursday.

Evidence: "meet on Thursday in Room Three"

2. What were the verified day and room?

Answer: Wednesday, Room Five.

Evidence: "on Wednesday in Room Five"

3. Where did the speaker first check the meeting details?

Answer: On the noticeboard.

Evidence: "I checked the noticeboard"

4. What part of the draft did the speaker keep?

Answer: The suggested order of information.

Evidence: "I kept the tool's suggested order of information"

5. What private information was kept out of the tool?

Answer: Classmates' phone numbers.

Evidence: "I also left classmates' phone numbers out of the tool."

Interpretation — suggested reasoning, not a required opinion

What useful contribution did the tool make, and what did that contribution not establish?

Suggested reasoning: It improved the order of information; that did not make its added meeting details reliable.

Supporting detail: “That help was real, but it was different from knowing when our meeting would happen”

Why might an apparently polished answer require particular care?

Suggested reasoning: A confident presentation can conceal invented or unchecked details.

Supporting detail: “The confident tone had made the invented details easy to overlook”

Transfer: use the matching Your turn activity in the Student Practice Pack. Assess the new exchange, not whether a learner reproduces the script’s wording or opinion.

12. Unit 6 • Original listening story and key

Is Love Enough? — Friends with different plans

Original fictional teaching script for the matching Chapter 2. Use the five detail questions in the main book or the identical Student Practice Pack worksheet. No external recording is required.

Delivery: read the following 235-word script twice using Section 1. Do not give students the script or key before the first listening unless an access arrangement requires it.

Read-aloud script

Two friends, Mariam and Salim, offered to run a community reading club. They both liked the idea, but they had not discussed the work involved. Mariam expected to meet every week. Salim could help only once a month because of his work schedule. Their first conversation became tense because each thought the other had changed the plan. When they compared their notes, they realized they had never agreed on a schedule. They decided to hold one meeting a month for the first three months. Mariam would choose a short reading, and Salim would arrange the room. They would share the task of welcoming new members. They still needed to decide how to pay for printing, so they wrote that question down for their next conversation.

Mariam later said that accepting a monthly meeting had felt like caring less about the project. Salim had understood the same agreement differently: he thought it made a promise he could actually keep. Neither meaning had been obvious during their first conversation. They agreed to review the arrangement after three meetings and to explain early if a responsibility became difficult. They also left room to disagree about the project without treating every disagreement as a judgment about their friendship. The schedule was a practical result, but the more important change was how they reached it. They stopped asking who cared more and started asking what each person could reliably contribute.

Gist — suggested answer: Two friends discover an unstated difference in expectations and agree on a trial plan.

Detail key — one point each; accept accurate paraphrases.

1. How often did Mariam first expect to meet?

Answer: Every week.

Evidence: “Mariam expected to meet every week.”

2. Why could Salim help only monthly?

Answer: Because of his work schedule.

Evidence: “because of his work schedule”

3. What schedule did they agree to try?

Answer: One meeting a month for the first three months.

Evidence: “one meeting a month for the first three months”

4. Who would arrange the room?

Answer: Salim.

Evidence: “Salim would arrange the room”

5. Which question remained unresolved?

Answer: How to pay for printing.

Evidence: “They still needed to decide how to pay for printing”

Interpretation — suggested reasoning, not a required opinion

Why did the same monthly schedule initially have different meanings for the two friends?

Suggested reasoning: Mariam associated frequency with commitment; Salim associated a realistic promise with commitment.

Supporting detail: “he thought it made a promise he could actually keep”

What change in their conversation helped them move beyond blame?

Suggested reasoning: They discussed reliable contributions rather than trying to decide who cared more.

Supporting detail: “They stopped asking who cared more and started asking what each person could reliably contribute”

Transfer: use the matching Your turn activity in the Student Practice Pack. Assess the new exchange, not whether a learner reproduces the script’s wording or opinion.

13. Unit 7 • Original listening story and key

Globalization — Testing an online market

Original fictional teaching script for the matching Chapter 2. Use the five detail questions in the main book or the identical Student Practice Pack worksheet. No external recording is required.

Delivery: read the following 249-word script twice using Section 1. Do not give students the script or key before the first listening unless an access arrangement requires it.

Read-aloud script

A community center invited six craft sellers to try an online market. Some sellers hoped to reach customers in other countries, but the organizers were worried about shipping costs. They decided to begin with local collection for one month. Sellers without reliable internet could bring product descriptions to the center, where a volunteer would help prepare listings with their permission. The group agreed to record the number of orders, the costs, and the time each seller spent on the trial. They also planned to ask people who could not take part what had stopped them. No one knew yet whether the market would be worth continuing. At the end of the month, they would review the information together before deciding whether to expand.

One organizer wanted to announce success as soon as the first orders arrived. Another asked whose costs would appear in that announcement. A volunteer might spend an hour preparing a listing, while a seller might wait all afternoon for a collection. They decided that the review should include those experiences, not just sales. They would also ask whether the trial had brought in new customers or merely moved existing orders online. The smaller trial postponed the possibility of wider trade, but it made a mistake less expensive to correct. At the review, sellers would be able to recommend changing the plan, continuing it, or stopping. An invitation to participate would not count as a voice in the decision unless their views could affect what happened next.

Gist — suggested answer: A community plans a limited market trial and decides what evidence to collect before expanding.

Detail key — one point each; accept accurate paraphrases.

1. How many sellers were invited?

Answer: Six.

Evidence: “invited six craft sellers”

2. What cost worried the organizers?

Answer: Shipping costs.

Evidence: “worried about shipping costs”

3. How long would the local collection trial last?

Answer: One month.

Evidence: “local collection for one month”

4. How could sellers without reliable internet get help?

Answer: Bring descriptions to the center for a volunteer to help prepare listings, with permission.

Evidence: “a volunteer would help prepare listings with their permission”

5. Had they already decided to expand the market?

Answer: No; they would review the information before deciding.

Evidence: “review the information together before deciding whether to expand”

Interpretation — suggested reasoning, not a required opinion

Why would counting orders alone give an incomplete picture of the trial?

Suggested reasoning: It would overlook unpaid time, collection difficulties and whether orders were genuinely new.

Supporting detail: “the review should include those experiences, not just sales”

What would make consultation meaningful rather than merely symbolic?

Suggested reasoning: Sellers’ views must be able to change whether and how the market continues.

Supporting detail: “their views could affect what happened next”

Transfer: use the matching Your turn activity in the Student Practice Pack. Assess the new exchange, not whether a learner reproduces the script’s wording or opinion.

14. Unit 8 • Original listening story and key

Lingua Franca — Making the welcome clear

Original fictional teaching script for the matching Chapter 2. Use the five detail questions in the main book or the identical Student Practice Pack worksheet. No external recording is required.

Delivery: read the following 243-word script twice using Section 1. Do not give students the script or key before the first listening unless an access arrangement requires it.

Read-aloud script

Our international student group was planning a welcome event at the library. The organizer said we would break the ice at ten on Saturday morning. One new member asked whether that meant an outdoor activity. The organizer thanked her for asking and explained that break the ice meant helping people feel comfortable talking. The first activity would be indoors: introduce yourself to a partner and share one interest. A second person asked whether ten meant morning or evening, so the organizer wrote ten in the morning on the agenda. Before moving on, she asked two volunteers to explain the first activity in their own words. Their explanations showed that the instructions were now clear. The group kept the friendly expression, but added plain instructions that everyone could use.

Later, a member worried that explaining every expression would make our conversation dull. Another pointed out that she had understood every individual word but had still imagined the wrong activity. We did not decide to remove all idioms or make everyone sound alike. We decided to explain expressions when the practical meaning mattered, and to make it easy to ask without embarrassment. At the welcome event, partners could introduce a useful phrase from another language as well as explain something about themselves. English helped people take part in one conversation; it did not tell us how much they knew in other languages. A successful exchange would leave room for more than one way of speaking.

Gist — suggested answer: A group makes an idiom and event instructions clear for a multilingual audience.

Detail key — one point each; accept accurate paraphrases.

1. Where would the welcome event take place?

Answer: At the library.

Evidence: “a welcome event at the library”

2. What did one member first think break the ice might mean?

Answer: An outdoor activity.

Evidence: “whether that meant an outdoor activity”

3. What would partners share after introducing themselves?

Answer: One interest.

Evidence: “share one interest”

4. What time and day were confirmed?

Answer: Ten on Saturday morning.

Evidence: “at ten on Saturday morning”

5. How did the organizer check that the first activity was clear?

Answer: By asking two volunteers to explain it in their own words.

Evidence: “asked two volunteers to explain the first activity in their own words”

Interpretation — suggested reasoning, not a required opinion

Why was knowing the individual words insufficient in the misunderstanding?

Suggested reasoning: The phrase had an idiomatic meaning different from the literal activity imagined by the listener.

Supporting detail: “she had understood every individual word but had still imagined the wrong activity”

What distinction does the ending make between shared communication and uniformity?

Suggested reasoning: People can clarify practical meanings while retaining different expressions, languages and voices.

Supporting detail: “We did not decide to remove all idioms or make everyone sound alike”

Transfer: use the matching Your turn activity in the Student Practice Pack. Assess the new exchange, not whether a learner reproduces the script’s wording or opinion.

15. Pilot observation and revision record

A plan is supplied; a live pilot and its findings are not. Complete this record after teaching rather than claiming improvement in advance.

Class/date: _____ Unit/lesson: _____ Number of learners: ___

Selected input: course story read aloud / access adaptation / other: _____

Actual timings and unfinished work: _____

Observed learner strength, with an example: _____

Observed difficulty, with an example: _____

Learners needing different support (private codes only): _____

Did all learners get speaking turns? How did I check? _____

Did anyone need a neutral topic or access adaptation? _____

What the students' feedback suggests: _____

One revision to try, and when: _____

If comparing attempts, record the prompt, preparation time, speaking time, support, and evidence. Improvement on a repeated task does not by itself prove general proficiency growth or a causal effect of this book.

Record actual observations before drawing conclusions about learning. The original listening stories and their detail keys are supplied here and match Chapter 2. Open-response activities accept supported alternatives; independent review and actual classroom evidence remain distinct from a supplied teaching plan.

16. Reading closed-response keys — Units 2–8

These keys refer to the readings in the self-contained course. The listening stories have their own detail keys above. The Unit 1 reading key appears earlier. Each quotation identifies the paragraph supporting the answer; it verifies passage alignment, not the factual accuracy of every real-world claim. Accept equivalent corrections of false statements. Open discussions have no single required opinion.

Unit 2 — reading

Multiple choice 1: What is the main purpose of the reading?

Answer: B — To show why goal setting is important

Reading paragraph 1: “A dream gives you something to imagine: becoming a doctor, starting a business, travelling, or speaking another language with confidence. A goal begins to turn that possibility into a plan. It names something you want to do and gives you a reason to take the next step. Neither a dream nor a written goal can do the work for you.”

Multiple choice 2: According to the reading, what is the difference between a dream and a goal?

Answer: B — Goals require action and planning.

Reading paragraph 2: “The difference between a wish and a goal is action. Wishing to improve your English does not tell you what to practise today. A workable goal connects the result you want with smaller steps you can take. You need a direction, a routine, and a way to notice whether the routine is helping.”

Multiple choice 3: Why did the second student improve more than the first student?

Answer: C — He had a specific plan and practiced consistently.

Reading paragraph 3: “Consider two university students learning English. The first says, ‘I want to speak fluently someday,’ but rarely practises. The second plans to learn 20 words a week, read an article each day, and speak for 15 minutes after class. In this example, the second student makes more progress because the plan is specific and followed consistently. Those numbers are an example, not a schedule everyone must copy.”

Multiple choice 4: According to the reading, what should people do when they face obstacles?

Answer: C — Review their plan and continue working.

Reading paragraph 4: “A goal can help you decide what to return to when you meet an obstacle. Exams, work, illness, or family responsibilities may interrupt a routine. Rather than treating the interruption as proof of failure, review your plan. What can you still do? What needs to change? Continuing may mean taking a smaller step, not simply trying harder.”

Multiple choice 5: Which statement is TRUE according to the reading?

Answer: B — Writing a goal down can make it easier to review.

Reading paragraph 6: “Writing a goal down makes it easier to review. Record what you intend to do, how you will practise, and when you will check the result. A supportive friend, teacher, or family member can ask how the plan is going. Sharing a goal may strengthen your commitment, but choose support that helps rather than adds pressure.”

True or false 1: _____ A goal is simply another word for a dream.

Answer: F — False

Possible correction: A goal requires action and planning, not only a wish.

Reading paragraph 2: “The difference between a wish and a goal is action. Wishing to improve your English does not tell you what to practise today. A workable goal connects the result you want with smaller steps you can take.

You need a direction, a routine, and a way to notice whether the routine is helping."

True or false 2: _____ Daily action is more important than having a dream alone.

Answer: T — True

Reading paragraph 2: "The difference between a wish and a goal is action. Wishing to improve your English does not tell you what to practise today. A workable goal connects the result you want with smaller steps you can take. You need a direction, a routine, and a way to notice whether the routine is helping."

True or false 3: _____ Obstacles mean you should stop trying.

Answer: F — False

Possible correction: Obstacles call for reviewing and adjusting a plan, not automatically stopping.

Reading paragraph 4: "A goal can help you decide what to return to when you meet an obstacle. Exams, work, illness, or family responsibilities may interrupt a routine. Rather than treating the interruption as proof of failure, review your plan. What can you still do? What needs to change? Continuing may mean taking a smaller step, not simply trying harder."

True or false 4: _____ The passage recommends reviewing progress regularly.

Answer: T — True

Reading paragraph 5: "That is why flexibility matters. A plan that worked last month may no longer fit your circumstances. You might change the time you practise, reduce a task, ask for help, or reconsider the goal itself. Review your progress regularly. Changing an unrealistic goal can be a thoughtful decision rather than a failure to keep a promise."

True or false 5: _____ Sharing your goals with others may increase your commitment.

Answer: T — True

Reading paragraph 6: "Writing a goal down makes it easier to review. Record what you intend to do, how you will practise, and when you will check the result. A supportive friend, teacher, or family member can ask how the plan is going. Sharing a goal may strengthen your commitment, but choose support that helps rather than adds pressure."

Unit 3 — reading

Multiple choice 1: What is the main purpose of the passage?

Answer: B — To explain the importance of emotional intelligence.

Reading paragraph 1: "A person may solve a difficult problem yet struggle to listen when a colleague disagrees. Someone else may understand a lesson but find it hard to respond to criticism. IQ tests assess some cognitive abilities; they do not describe every skill used in daily life. Emotional intelligence offers a way to discuss how people notice emotions and respond to them."

Multiple choice 2: In the passage, an emotionally intelligent response involves

Answer: C — managing emotions thoughtfully.

Reading paragraph 2: "Emotional intelligence involves recognizing and understanding emotions in yourself and others, then choosing how to respond. Managing an emotion does not mean pretending it is absent. You might notice frustration, pause before answering, and ask a question rather than react impulsively. The aim is a thoughtful, constructive response, especially when a conversation is difficult."

Multiple choice 3: Which of the following is NOT one of Goleman's five components?

Answer: C — Creativity

Reading paragraph 3: “One model, popularized by psychologist Daniel Goleman, describes five components: self-awareness, self-regulation, motivation, empathy, and social skills. Self-awareness means noticing your feelings and their influence on your behavior. Self-regulation concerns your response to those feelings. Motivation helps you continue toward a goal. Empathy involves considering another person’s feelings and perspective; social skills help you communicate and work with others. This is one framework, not the only way to describe emotional life.”

Multiple choice 4: According to the passage, emotional intelligence can

Answer: B — be developed through practice.

Reading paragraph 6: “You can practise these skills in small ways. Notice an emotion before naming someone else’s intention. Listen actively, ask for feedback, and pause before responding. Afterwards, consider what helped and what you might change. Understanding another perspective does not require agreeing with it, and managing your response does not mean accepting disrespect.”

Multiple choice 5: What is the author’s overall conclusion?

Answer: B — Emotional intelligence is valuable in many areas of life.

Reading paragraph 7: “Emotional intelligence is useful because knowledge alone does not tell us how to handle every interaction. We also need ways to understand ourselves, communicate our concerns, and respond to other people. Treat the framework as an invitation to practise those skills, not as a label that divides people into good and bad personalities.”

True or false 1: _____ Emotional intelligence only affects workplace relationships.

Answer: F — False

Possible correction: The passage discusses classroom as well as workplace interactions.

Reading paragraph 5: “The same ideas apply in a classroom. Feedback may feel uncomfortable even when it is useful. A student can ask for a specific example, explain what is unclear, and decide what to try next. Working with others also involves taking turns and considering different perspectives. Emotional skills can support learning alongside subject knowledge; they are not a substitute for it.”

True or false 2: _____ The passage encourages thoughtful responses rather than impulsive reactions.

Answer: T — True

Reading paragraph 2: “Emotional intelligence involves recognizing and understanding emotions in yourself and others, then choosing how to respond. Managing an emotion does not mean pretending it is absent. You might notice frustration, pause before answering, and ask a question rather than react impulsively. The aim is a thoughtful, constructive response, especially when a conversation is difficult.”

True or false 3: _____ The passage presents a five-component model popularized by Daniel Goleman.

Answer: T — True

Reading paragraph 3: “One model, popularized by psychologist Daniel Goleman, describes five components: self-awareness, self-regulation, motivation, empathy, and social skills. Self-awareness means noticing your feelings and their influence on your behavior. Self-regulation concerns your response to those feelings. Motivation helps you continue toward a goal. Empathy involves considering another person’s feelings and perspective; social skills help you communicate and work with others. This is one framework, not the only way to describe emotional life.”

True or false 4: _____ Emotional intelligence cannot be improved.

Answer: F — False

Possible correction: Emotional skills can be practised through listening, feedback, reflection, and pausing.

Reading paragraph 6: “You can practise these skills in small ways. Notice an emotion before naming someone else’s intention. Listen actively, ask for feedback, and pause before responding. Afterwards, consider what helped and what you might change. Understanding another perspective does not require agreeing with it, and managing your response does not mean accepting disrespect.”

True or false 5: _____ Active listening is one way to strengthen emotional intelligence.

Answer: T — True

Reading paragraph 6: “You can practise these skills in small ways. Notice an emotion before naming someone else’s intention. Listen actively, ask for feedback, and pause before responding. Afterwards, consider what helped and what you might change. Understanding another perspective does not require agreeing with it, and managing your response does not mean accepting disrespect.”

Unit 4 — reading

Multiple choice 1: What is the main purpose of the passage?

Answer: B — To examine different views about money and happiness.

Reading paragraph 1: “Does more money mean a happier life? The question sounds simple until you ask what the money is needed for. Paying for food or housing is different from buying another luxury item. People also value different things: security, health, relationships, meaningful work, or time to themselves. To discuss money and happiness, we need to consider those differences rather than search for one answer that fits everyone.”

Multiple choice 2: According to the passage, how can money improve people’s lives?

Answer: B — By helping people satisfy their basic needs.

Reading paragraph 2: “Money helps people meet basic needs such as food, housing, healthcare, and education. Having enough to pay essential bills or handle an unexpected expense can reduce financial worry. That makes financial security important. A discussion of happiness should not dismiss the practical difference between being unable to meet a need and having the resources to meet it.”

Multiple choice 3: What is the “hedonic treadmill”?

Answer: B — The tendency to become used to higher levels of wealth.

Reading paragraph 3: “More income does not guarantee that every part of life will improve. People can become used to a higher standard of living and begin wanting more. This process is often called the hedonic treadmill: an improvement becomes familiar rather than remaining as exciting as it first seemed. It is a useful idea to discuss, not a fixed income threshold or a rule that describes everyone’s experience.”

Multiple choice 4: Which kind of spending does the passage discuss as a possible source of shared memories?

Answer: B — Investing in meaningful experiences.

Reading paragraph 4: “How money is used matters too. A meaningful experience—learning a skill, taking a trip, or sharing time with people you care about—may offer something different from an expensive possession. Helping someone else may also bring a sense of purpose. Experiences can become shared memories, but neither generosity nor travel guarantees happiness. Their value depends on the person, the circumstances, and what needs the spending serves.”

Multiple choice 5: What is the author’s overall conclusion?

Answer: C — Money is valuable, but lasting happiness depends on how it is used.

Reading paragraph 7: “Instead of asking only whether money buys happiness, ask what a particular use of money makes possible—and what it may leave out. Does it meet an important need? Support a valued relationship? Create pressure elsewhere? A thoughtful answer connects money with the life someone is trying to build, rather than treating wealth itself as the final goal.”

True or false 1: _____ Financial security can reduce stress.

Answer: T — True

Reading paragraph 2: “Money helps people meet basic needs such as food, housing, healthcare, and education. Having enough to pay essential bills or handle an unexpected expense can reduce financial worry. That makes financial security important. A discussion of happiness should not dismiss the practical difference between being unable to meet a need and having the resources to meet it.”

True or false 2: _____ The passage claims that earning more money always increases happiness.

Answer: F — False

Possible correction: The passage says more income does not guarantee improvement in every part of life.

Reading paragraph 3: “More income does not guarantee that every part of life will improve. People can become used to a higher standard of living and begin wanting more. This process is often called the hedonic treadmill: an improvement becomes familiar rather than remaining as exciting as it first seemed. It is a useful idea to discuss, not a fixed income threshold or a rule that describes everyone’s experience.”

True or false 3: _____ The passage suggests that experiences can create shared memories.

Answer: T — True

Reading paragraph 4: “How money is used matters too. A meaningful experience—learning a skill, taking a trip, or sharing time with people you care about—may offer something different from an expensive possession. Helping someone else may also bring a sense of purpose. Experiences can become shared memories, but neither generosity nor travel guarantees happiness. Their value depends on the person, the circumstances, and what needs the spending serves.”

True or false 4: _____ Working long hours never affects emotional well-being.

Answer: F — False

Possible correction: Extra work may reduce time for rest and relationships.

Reading paragraph 5: “Earning more can also involve a trade-off. Extra hours at work may increase income while leaving less time for rest, relationships, or other responsibilities. For someone whose basic needs are not secure, that choice may be difficult rather than freely made. Consider both the benefit of the income and the possible cost to well-being before judging another person’s decision.”

True or false 5: _____ The author believes money is a tool rather than the ultimate goal.

Answer: T — True

Reading paragraph 6: “Money is a tool, not a complete measure of a life. It can provide security, choices, and opportunities. Meaningful experiences, generosity, relationships, and personal growth are also worth considering when deciding how to use it. A balance that suits one person may not suit another, and circumstances can change what is possible.”

Unit 5 — reading

Multiple choice 1: According to the passage, one of AI’s greatest strengths is its ability to

Answer: B — process enormous amounts of information quickly.

Reading paragraph 2: “AI can process large amounts of information, recognize patterns, and handle some repetitive tasks quickly. Its usefulness and accuracy depend on the task, the system, and the data. A tool that performs well in one setting may fail in another. Businesses, hospitals, schools, and governments therefore need more than a demonstration of speed; they need ways to check results and decide who is responsible for them.”

Multiple choice 2: Which field is mentioned as being significantly influenced by AI?

Answer: B — Education

Reading paragraph 4: “In education, AI may help explain a concept, suggest practice, or summarize a text. It can also make it easier to submit an answer without understanding it. A useful test is whether you can explain the result yourself, check it against the source, and notice what is missing. Treat AI as a possible assistant to learning, not a replacement for your own thinking or a teacher’s guidance.”

Multiple choice 3: Which concern about AI is raised in the passage?

Answer: B — AI may replace jobs and raise privacy concerns.

Reading paragraph 3: “There are also risks. Automation can change the work people do and the skills they need. Collecting data can create privacy concerns, particularly when people do not know how their information will be used. AI can produce errors, invent plausible details, or repeat bias in its data. Human judgment is essential, but checking must be informed and deliberate rather than a quick glance at the answer.”

Multiple choice 4: According to the passage, how should students use AI?

Answer: C — As a learning assistant that supports independent thinking.

Reading paragraph 4: “In education, AI may help explain a concept, suggest practice, or summarize a text. It can also make it easier to submit an answer without understanding it. A useful test is whether you can explain the result yourself, check it against the source, and notice what is missing. Treat AI as a possible assistant to learning, not a replacement for your own thinking or a teacher’s guidance.”

Multiple choice 5: What is the author’s main message?

Answer: C — AI can be useful, but important decisions require careful human checking.

Reading paragraph 5: “The question is not simply whether AI is a friend or a foe. Ask what a particular tool is doing, what evidence supports its output, and who may be affected if it is wrong. Responsible use includes protecting private information, acknowledging uncertainty, and keeping people accountable for important decisions. Learning to work with AI includes knowing when not to rely on it.”

True or false 1: _____ AI is mainly a technology that will be used in the distant future.

Answer: F — False

Possible correction: AI already appears in ordinary activities.

Reading paragraph 1: “Artificial intelligence, or AI, already appears in ordinary activities. A tool may help translate a message, suggest a film, generate an image, or draft an email. People also use AI to look for information, including health information. Using a tool does not make its answer reliable: a confident response still needs to be checked, especially when a decision could affect someone’s health, rights, or finances.”

True or false 2: _____ AI can recognize patterns and analyze large amounts of data quickly.

Answer: T — True

Reading paragraph 2: “AI can process large amounts of information, recognize patterns, and handle some repetitive tasks quickly. Its usefulness and accuracy depend on the task, the system, and the data. A tool that performs well in one setting may fail in another. Businesses, hospitals, schools, and governments therefore need more than a demonstration of speed; they need ways to check results and decide who is responsible for them.”

True or false 3: _____ The author believes AI always produces accurate information.

Answer: F — False

Possible correction: AI can produce errors, invented details, or biased output.

Reading paragraph 3: “There are also risks. Automation can change the work people do and the skills they need. Collecting data can create privacy concerns, particularly when people do not know how their information will be used. AI can produce errors, invent plausible details, or repeat bias in its data. Human judgment is essential, but checking must be informed and deliberate rather than a quick glance at the answer.”

True or false 4: _____ The passage suggests that students should become completely dependent on AI.

Answer: F — False

Possible correction: Students should retain their own thinking and check what the tool produces.

Reading paragraph 4: “In education, AI may help explain a concept, suggest practice, or summarize a text. It can also make it easier to submit an answer without understanding it. A useful test is whether you can explain the result yourself, check it against the source, and notice what is missing. Treat AI as a possible assistant to learning, not a replacement for your own thinking or a teacher’s guidance.”

True or false 5: _____ The passage recommends checking AI outputs and protecting private information.

Answer: T — True

Reading paragraph 5: “The question is not simply whether AI is a friend or a foe. Ask what a particular tool is doing, what evidence supports its output, and who may be affected if it is wrong. Responsible use includes protecting private information, acknowledging uncertainty, and keeping people accountable for important decisions. Learning to work with AI includes knowing when not to rely on it.”

Unit 6 — reading

Multiple choice 1: What is the main idea of the passage?

Answer: B — Love is important, but a lasting marriage requires more than love.

Reading paragraph 1: “Love is often described as the foundation of a successful marriage. Two people may care deeply about each other and imagine a future together. Yet sharing a life involves more than strong feelings. The question ‘Is love enough?’ invites us to consider what else a respectful, lasting relationship may need. You can explore that question through fictional people rather than private experiences.”

Multiple choice 2: Why can marriage reveal differences between partners?

Answer: A — Couples have to deal with responsibilities and challenges together.

Reading paragraph 2: “Partners make decisions, share responsibilities, and respond to financial pressures or changes in their lives. These situations can reveal differences that were not obvious at the beginning. Emotional attraction alone does not decide how responsibilities will be shared or how a disagreement will be handled. Those questions need conversation and choices from both people.”

Multiple choice 3: According to the passage, what can happen when couples ignore their problems?

Answer: B — The problems may remain unresolved.

Reading paragraph 3: “Communication matters because agreement cannot simply be assumed. Partners need ways to express concerns and listen to each other without threats or humiliation. Avoiding a problem may leave it unresolved; discussing it respectfully may make the differences clearer. Understanding a perspective is a starting point for a decision, not a promise that every difference can be solved.”

Multiple choice 4: What does the passage suggest about conflict in marriage?

Answer: C — The way couples handle disagreements is more important than avoiding them.

Reading paragraph 6: “Disagreements are an ordinary part of long-term relationships; destructive conflict is not something anyone must accept. Listening, taking responsibility, and allowing time to think can help a respectful discussion. Compromise does not mean accepting coercion, threats, or violence. A lesson about communication

should never be read as an instruction to stay in an unsafe relationship."

Multiple choice 5: What does a lasting relationship require, according to the passage?

Answer: B — Ongoing effort, trust, communication, and respect

Reading paragraph 11: "Love may bring people together; trust, respect, communication, commitment, and mutual effort shape how they share their lives. These ideas are a starting point for discussion, not a formula for every marriage. A thoughtful answer considers both the relationship people want to build and the boundaries each person needs to maintain."

True or false 1: _____ Couples need to communicate honestly about their concerns.

Answer: T — True

Reading paragraph 3: "Communication matters because agreement cannot simply be assumed. Partners need ways to express concerns and listen to each other without threats or humiliation. Avoiding a problem may leave it unresolved; discussing it respectfully may make the differences clearer. Understanding a perspective is a starting point for a decision, not a promise that every difference can be solved."

True or false 2: _____ Trust means believing that your partner will never make mistakes.

Answer: F — False

Possible correction: Trust concerns honesty, respect, and safety, not an expectation that nobody makes mistakes.

Reading paragraph 4: "Trust is another part of the relationship. It involves more than expecting a partner never to make a mistake. It concerns honesty, respect, and whether each person's words and actions give the other reason to feel safe. Constant suspicion can make trust difficult, but trust should not be demanded as a reason to ignore harmful behavior."

True or false 3: _____ Unrealistic expectations can put pressure on a relationship.

Answer: T — True

Reading paragraph 5: "Expectations can create pressure too. One person may expect a partner to understand every feeling without being told or to meet every emotional need. Another may imagine that a good relationship never includes disappointment. Naming and discussing expectations gives both people a chance to consider which are realistic and which place too much responsibility on the other."

True or false 4: _____ The passage treats disagreements as an ordinary part of long-term relationships.

Answer: T — True

Reading paragraph 6: "Disagreements are an ordinary part of long-term relationships; destructive conflict is not something anyone must accept. Listening, taking responsibility, and allowing time to think can help a respectful discussion. Compromise does not mean accepting coercion, threats, or violence. A lesson about communication should never be read as an instruction to stay in an unsafe relationship."

True or false 5: _____ The passage suggests that successful couples never experience emotional distance.

Answer: F — False

Possible correction: Even healthy couples may experience disappointment or emotional distance.

Reading paragraph 8: "A relationship may change as people and circumstances change. The excitement of a new relationship can become more familiar, and even healthy couples may experience disappointment or emotional distance. Shared time, appreciation, support, and continuing conversations can help people maintain a sense of partnership. Effort needs to be mutual, not a duty assigned to only one person."

True or false 6: _____ External factors can influence the quality of a marriage.

Answer: T — True

Reading paragraph 7: “Not every difficulty begins inside the relationship. Work demands, financial problems, family expectations, social pressures, and cultural differences may also affect it. These outside factors can change what support people need. Discussing them helps distinguish a practical pressure from an assumption about a partner’s intentions.”

True or false 7: _____ A lasting relationship requires continuous effort.

Answer: T — True

Reading paragraph 8: “A relationship may change as people and circumstances change. The excitement of a new relationship can become more familiar, and even healthy couples may experience disappointment or emotional distance. Shared time, appreciation, support, and continuing conversations can help people maintain a sense of partnership. Effort needs to be mutual, not a duty assigned to only one person.”

Unit 7 — reading

Multiple choice 1: What is the main idea of the passage?

Answer: B — Globalization has connected the world and created both opportunities and challenges.

Reading paragraph 9: “Globalization is therefore neither entirely good nor entirely bad. A useful response weighs opportunities against costs and considers how local communities, workers, cultures, and the environment might be protected. That requires looking at particular connections rather than defending or rejecting every international exchange at once.”

Multiple choice 2: According to the passage, what has helped globalization grow?

Answer: A — Technology, transportation, trade, and the internet

Reading paragraph 3: “Globalization is the growing movement of people, products, ideas, and information across borders. Technology, transport, international trade, and the internet help make those connections possible. The term describes several linked processes, not a single invention or a change that affects every place in the same way.”

Multiple choice 3: How can globalization benefit businesses?

Answer: B — It allows them to reach new markets and customers.

Reading paragraph 4: “A business might design a product in one country, manufacture it in another, and sell it internationally. A student might take an online course from a distant university. A small business might reach overseas customers through social media. These examples show how distance can become less of a barrier to some activities, although cost, regulation, language, and access still matter.”

Multiple choice 4: Why are some people concerned about globalization?

Answer: B — They are concerned about local cultures, jobs, inequality, and the environment.

Reading paragraph 7: “There are reasons for concern. Local businesses may struggle to compete with large international companies. Moving production can create jobs in one place and remove them in another. Local traditions may receive less attention as global trends become more visible. Benefits are not shared equally, so a discussion should ask who gains, who loses, and whose view has not been heard.”

Multiple choice 5: What does the passage mean when it says communication across distance can be easier?

Answer: B — People can communicate and interact across long distances more easily.

Reading paragraph 10: “When people say that the world is getting smaller, they do not mean that physical distance has disappeared. They mean that communication and interaction across distance can be easier. Globalization

already affects daily life, but its effects differ. Ask how a connection works and what it changes for the people involved."

True or false 1: _____ Globalization has made it easier for products and information to cross borders.

Answer: T — True

Reading paragraph 3: "Globalization is the growing movement of people, products, ideas, and information across borders. Technology, transport, international trade, and the internet help make those connections possible. The term describes several linked processes, not a single invention or a change that affects every place in the same way."

True or false 2: _____ Only large international companies can benefit from globalization.

Answer: F — False

Possible correction: A small business can also reach overseas customers.

Reading paragraph 4: "A business might design a product in one country, manufacture it in another, and sell it internationally. A student might take an online course from a distant university. A small business might reach overseas customers through social media. These examples show how distance can become less of a barrier to some activities, although cost, regulation, language, and access still matter."

True or false 3: _____ Globalization has influenced culture, including music, food, fashion, and language.

Answer: T — True

Reading paragraph 6: "Culture moves through these networks as well. Someone in Kabul may listen to Korean music, watch an American film, eat Italian food, or speak with a friend in Japan. Music, food, fashion, and language can travel and change as people adapt them. Cultural exchange can introduce new choices without making everyone's experience identical."

True or false 4: _____ Everyone benefits equally from globalization.

Answer: F — False

Possible correction: Benefits are not shared equally.

Reading paragraph 7: "There are reasons for concern. Local businesses may struggle to compete with large international companies. Moving production can create jobs in one place and remove them in another. Local traditions may receive less attention as global trends become more visible. Benefits are not shared equally, so a discussion should ask who gains, who loses, and whose view has not been heard."

True or false 5: _____ The passage presents globalization as completely positive.

Answer: F — False

Possible correction: The passage considers costs as well as opportunities.

Reading paragraph 9: "Globalization is therefore neither entirely good nor entirely bad. A useful response weighs opportunities against costs and considers how local communities, workers, cultures, and the environment might be protected. That requires looking at particular connections rather than defending or rejecting every international exchange at once."

True or false 6: _____ International transportation can create environmental problems.

Answer: T — True

Reading paragraph 8: "The environment is part of the discussion too. International transport uses energy and can produce emissions. Producing and moving large quantities of goods can contribute to pollution and waste. The effects depend on how goods are made and transported; a product's foreign origin alone does not tell us its full environmental impact."

True or false 7: _____ The writer believes globalization is already affecting our lives.

Answer: T — True

Reading paragraph 10: “When people say that the world is getting smaller, they do not mean that physical distance has disappeared. They mean that communication and interaction across distance can be easier. Globalization already affects daily life, but its effects differ. Ask how a connection works and what it changes for the people involved.”

Unit 8 — reading

Multiple choice 1: What is the main purpose of the reading?

Answer: B — To explain how English became globally influential and discuss its consequences

Reading paragraph 1: “English is used in international business, science, aviation, education, entertainment, and online communication. In many settings it serves as a lingua franca: a language people use to communicate when they do not share a first language. How did a language once associated mainly with England and parts of the British Isles become so widely used, and what does that mean for its users?”

Multiple choice 2: What was one important reason English spread internationally?

Answer: A — British expansion and colonialism

Reading paragraph 2: “The expansion of the British Empire was an important part of the story. English travelled through colonial administration, trade, education, and other institutions. That history involved unequal power, not simply a language becoming popular because people preferred it. Its effects differed across places and continue to influence opportunities and attitudes toward English.”

Multiple choice 3: What helped strengthen English during the twentieth century?

Answer: B — The economic and cultural influence of the United States

Reading paragraph 3: “During the twentieth century, the economic, political, scientific, and cultural influence of the United States helped strengthen English internationally. Companies, films, universities, and research institutions contributed to its visibility and use. British colonial expansion and later American influence are different parts of a complicated history, not a complete explanation of every community’s language choices.”

Multiple choice 4: According to the reading, what did technology do?

Answer: C — It accelerated the global use of English.

Reading paragraph 4: “Technology created further opportunities to use English across borders. Researchers, businesses, and people online could communicate with distant audiences. A person in Afghanistan might read an article from Japan, watch a video from the United States, and exchange messages with someone in Germany using English. Technology accelerated these connections; it did not make access equal or remove the value of other languages.”

Multiple choice 5: Why does the writer ask, “Who owns English?”

Answer: B — Because millions of non-native speakers use and shape the language

Reading paragraph 6: “English is not used only by people who learned it as a first language. Millions use it as an additional language and adapt it to local needs. English in India, Nigeria, and Singapore has developed in different contexts and has different characteristics. These varieties remind us that international use does not mean everyone speaks in exactly the same way.”

17. Vocabulary completion keys — Units 1–7

These suggested completions cover all 36 vocabulary blanks in the book. Unit 8 uses vocabulary discussion rather than a completion exercise. Accept other grammatically and contextually suitable answers; some items admit more than one expression. Change number or pronouns where the sentence requires it. Unit 1 also appears in the broader key above.

Unit 1 — vocabulary

1. Good communication helps us _____ ideas clearly.

Suggested answer: express

Completed sentence: Good communication helps us express ideas clearly.

Other acceptable completions: communicate.

2. Never _____ to ask for help.

Suggested answer: hesitate

Completed sentence: Never hesitate to ask for help.

3. Teachers should encourage classroom _____.

Suggested answer: interaction

Completed sentence: Teachers should encourage classroom interaction.

4. Speaking regularly builds _____.

Suggested answer: confidence

Completed sentence: Speaking regularly builds confidence.

5. Every presentation has an important _____.

Suggested answer: message

Completed sentence: Every presentation has an important message.

Unit 2 — vocabulary

1. Hard work helps people _____ their goals.

Suggested answer: achieve

Completed sentence: Hard work helps people achieve their goals.

2. Every student should have a clear _____ for studying.

Suggested answer: goal

Completed sentence: Every student should have a clear goal for studying.

Other acceptable completions: strategy.

3. Practice leads to _____.

Suggested answer: progress

Completed sentence: Practice leads to progress.

4. Never lose your _____ when life becomes difficult.

Suggested answer: determination

Completed sentence: Never lose your determination when life becomes difficult.

Other acceptable completions: commitment.

5. Time management is an effective _____.

Suggested answer: strategy

Completed sentence: Time management is an effective strategy.

Unit 3 — vocabulary

1. Speaking English with a clear goal and focused feedback is a form of _____.

Suggested answer: conscious practice

Completed sentence: Speaking English with a clear goal and focused feedback is a form of conscious practice.

2. Team leaders should know how to _____ before problems become serious.

Suggested answer: resolve conflicts

Completed sentence: Team leaders should know how to resolve conflicts before problems become serious.

3. Receiving _____ helps students improve their writing.

Suggested answer: constructive feedback

Completed sentence: Receiving constructive feedback helps students improve their writing.

4. People who stay calm _____ usually make better decisions.

Suggested answer: under pressure

Completed sentence: People who stay calm under pressure usually make better decisions.

5. Learning another language allows you to _____ from different backgrounds.

Suggested answer: interact with others

Completed sentence: Learning another language allows you to interact with others from different backgrounds.

Unit 4 — vocabulary

1. Many people work two jobs simply to _____.

Suggested answer: make ends meet

Completed sentence: Many people work two jobs simply to make ends meet.

2. Spending time with family improves my _____.

Suggested answer: quality of life

Completed sentence: Spending time with family improves my quality of life.

Other acceptable completions: life satisfaction.

3. Buying a new phone cannot replace _____ shared with friends.

Suggested answer: meaningful experiences

Completed sentence: Buying a new phone cannot replace meaningful experiences shared with friends.

4. Success should never _____ your health.

Suggested answer: come at the expense of

Completed sentence: Success should never come at the expense of your health.

5. To live a happy life, people should _____ work and personal life.

Suggested answer: strike a balance between

Completed sentence: To live a happy life, people should strike a balance between work and personal life.

Unit 5 — vocabulary

1. Hospitals often use _____ to help analyze medical images.

Suggested answer: AI-powered tools

Completed sentence: Hospitals often use AI-powered tools to help analyze medical images.

Other acceptable completions: an AI-powered tool.

2. AI can _____ much faster than people.

Suggested answer: process enormous amounts of information

Completed sentence: AI can process enormous amounts of information much faster than people.

Other acceptable completions: recognize patterns.

3. Teachers want students to develop _____ instead of copying answers.

Suggested answer: independent thinking

Completed sentence: Teachers want students to develop independent thinking instead of copying answers.

4. Many experts _____ data privacy.

Suggested answer: raise concerns about

Completed sentence: Many experts raise concerns about data privacy.

5. In the future, people may _____ AI instead of competing against it.

Suggested answer: work alongside

Completed sentence: In the future, people may work alongside AI instead of competing against it.

Unit 6 — vocabulary

1. Healthy couples should be able to _____ without attacking each other.

Suggested answer: express concerns

Completed sentence: Healthy couples should be able to express concerns without attacking each other.

Other acceptable completions: navigate conflict.

2. Financial problems can make it difficult to _____.

Suggested answer: manage responsibilities

Completed sentence: Financial problems can make it difficult to manage responsibilities.

Other acceptable completions: meet someone’s needs.

3. People sometimes enter relationships with _____ about their partners.

Suggested answer: unrealistic expectations

Completed sentence: People sometimes enter relationships with unrealistic expectations about their partners.

4. Honesty and consistency are important when you want to _____.

Suggested answer: build trust

Completed sentence: Honesty and consistency are important when you want to build trust.

5. Marriage requires _____ from both partners.

Suggested answer: ongoing effort

Completed sentence: Marriage requires ongoing effort from both partners.

6. Support from a partner or friend can _____ a difficult period.

Suggested answer: carry you through

Completed sentence: Support from a partner or friend can carry you through a difficult period.

Other acceptable completions: carry someone through; carry us through; carry them through.

Unit 7 — vocabulary

1. The internet allows people to communicate _____ almost instantly.

Suggested answer: across borders

Completed sentence: The internet allows people to communicate across borders almost instantly.

2. Universities can _____ with researchers from other countries.

Suggested answer: collaborate across borders

Completed sentence: Universities can collaborate across borders with researchers from other countries.

3. _____ has become an important part of the modern global economy.

Suggested answer: International trade

Completed sentence: International trade has become an important part of the modern global economy.

4. Social media helps small businesses _____ that they could not access before.

Suggested answer: reach a market

Completed sentence: Social media helps small businesses reach a market that they could not access before.

5. Studying abroad can create _____ for young people.

Suggested answer: enormous opportunities

Completed sentence: Studying abroad can create enormous opportunities for young people.
